(PDF) Algorithms for Reinforcement Learning Deep Reinforcement Learning for Logic Synthesis Optimization. Abstract. Logic synthesis requires extensive tuning of the

synthesis optimization flow where the quality of results (QoR) depends on the sequence of optimizations used. Efficient design space exploration is challenging due to the exponential number of possible optimization permutations. GitHub - scale-lab/DRiLLS: DRiLLS: Deep Reinforcement ... Program Synthesis using Deduction-Guided Reinforcement Learning 5 Policy gradient algorithm. The policy gradient algorithm is a well-known RL algorithm for finding optimal policies. It assumes a parametric policy family  $\pi$  with parameters  $\theta$ . For example,  $\pi$  may be a deep neural network (DNN), where  $\theta$  denotes the parameters of the DNN.
