Wikipedia, the free encyclopedia In  
mathematics and in signal  
processing, the Hilbert transform is  
a specific linear operator that takes  
a function,  $u(t)$  of a real variable  
and produces another function of a  
real variable  $H(u)(t)$ . This linear  
operator is given by convolution  
with the function  $\{ \displaystyle 1/(\pi t) \}$  : Hilbert transform -
