side of l. Locus of a Point (solutions, examples, videos) $\therefore r=2\cos\theta$, which is already an equation for the locus of M in polar form ! $r=2\cos\theta$ is an equation of a circle. You can change back to Cartesian co-ordinate form. Multiply both sides by r , we get: $r = 2 r\cos\theta$ $x + y = 2x$ Therefore the locus of M is $x + y - 2x = 0$. A locus problem Locus Problems Working with locus problems usually involves describing the locus (most often with a construction) AND giving reasons or proof for your description. Things are usually simplified greatly by providing a visual display to interpret the verbal statement of the problem. In the first five problems below, a visual display is provided.
