Master Slave Control Of Interline Master/slave is a model of asymmetric communication or control where one device or process controls one or more other devices or processes and serves as their communication hub. In some systems a master is selected from a group of eligible devices, with the other devices acting in the role of slaves. Historically, the master/slave terminology has existed for many decades, although in the 21st century it has been a subject of controversy due to its association with slavery, and some organizations Master/slave (technology) - Wikipedia CiteSeerX - Document Details (Isaac Council, Lee Giles, Pradeep Teregowda):

setpoint (SP). Valve positioners therefore act as “slave” controllers to “master” process controllers controlling pressure, temperature, flow, or some other process variable. Cascade Control | Basic Process Control Strategies and ... A master-slave control strategy is proposed for steam flow sharing control of the MSMR systems. Under the proposed control strategy, one of the NSSS modules is selected as the master control channel, and its feed water flow rate is regulated using the steam header pressure error. The remaining NSSS modules are treated as the slave channels. The Kindle Owners' Lending Library has hundreds of thousands of free Kindle books available directly from Amazon.
