Membrane Separation Process By Kaushik Nath Pdf Download Separation technology by using membranes is an effective choice for water treatment, but fouling is a significant problem for membrane applications. Recently, transition-metal dichalcogenide nanosheets have been promising for water treatment owing to their good antifouling properties compared to other

nanosheets such as graphene oxide. However, using scalable exfoliation methods for membrane ... Solvent-exfoliated 2DWS2/polyethersulfone Antifouling ... Nanofiltration (NF) membranes, especially polyamide (PA) ones, are widely applied in water treatment, food processing, and resource recovery thanks to their excellent separation selectivity to small solutes and high water permeability. However, membrane fouling is inevitable during the long-term operation and limits the large-scale applications of NF technology. Chemical cleaning is considered ...
