Answer Key AP Biology Hormones.

Terms in this set (5) auxin (IAA)
stimulates stem elongation, root
growth, cell differentiation, and
branching; regulates development
of fruit; enhances apical
dominance; functions in
phototropism and gravitropism;
promotes xylem differentiation;
retards leaf abscission.

Chemical signals produced a very low concentrations and active in another part of the organism. They are synthesized or stored in one part of the plant, but they travel within phloem or from cell to cell in

response to the appropriate stimulus. Auxins. AP Bio Plant Hormones Questions and Study Guide | Quizlet ... Auxins were the first plant hormones discovered and have been studied extensively. Auxins are most commonly found in seed embryos, apical meristems and young leaves. The seed embryo has yet to... Plant Hormones: Chemical Control of Growth and ... Plant Hormones Definition Plant hormones are chemicals plants use for communication, coordination, and development between their many cells. Like animals, plants rely on these chemical signals to direct the expression of DNA and the operations of the cell. Plant hormones are natural substances which control many aspects of plant development. Plant Hormones - The
